

From Le Vigan to Mont Aigoual - Day 4

Cévennes

climatographe

Mont Aigoual, with its summit at 1567m, is the highest point in the Gard department. Psychagut was one of the 37 tree nurseries created for the reforestation programme on the Aigoual massif.

The Maison des Cévennes was once an estate combining livestock farming with various crop cultures grown on terraces. In the late 19th century, with the large reforestation programme on Mont Aigoual, the estate became an arboretum associated with the forester's house, which was subsequently restored as an inn.

Useful information

Practice : Pédestre

Duration : 4 h 30

Length : 17.4 km

Trek ascent : 401 m

Difficulty : Medium

Themes : Agriculture et élevage

Trek

Departure : Mont Aigoual

Arrival : Maison des Cévennes -
Puechagut

Cities : 1. Val-d'Aigoual

2. Bassurels

3. Meyrueis

4. Dourbies

5. Arphy

6. Bréau-Mars

Altimetric profile

Min elevation 1000 m Max elevation 1559 m

Signposts will guide you all along this route. In the description below, the signposted place names and/or directions are given in **bold italics** between quotation marks :

1. Starting at "**SOMMET DE L'AIGOUAL**", walk to "**STATION DE PRAT PEYROT**" via "**La Source**", "**Le Pontet**", "**La Baraquette**", "**La Sapinière**", "**Balcons de L'Aigoual - Parking**" (GR® 7 long-distance hiking path)
2. At "**STATION DE PRAT PEYROT**" continue on the GR® 7 to reach "**COL DE LA SERREYDE**" via "**Le Fangas**"
3. At "**COL DE LA SERREYREDE**" go to "**Les Mines**" (GR® 62),
4. Fork onto the road to "**le château**", "**Carrefour**" (yellow waymarks),
5. At "**Carrefour**" walk to "**La Bascule**" (GR® 60),
6. At "**La Bascule**" turn left to "**Route Dhombres**", then right to "**Bois du MasMéjean**" (yellow waymarks).
7. From "**Bois du MasMéjean**" walk to "**PUEYLONG**" on the road,
8. At "**PUEYLONG**" go to "**Bois de Montals**", then to "**Pont double**", "**Le Camping**", "**Col de la Broue**", "**Col de la sablière**" and "**PUECHAGUT Maison des Cévennes**" (GR® 7).

All useful information

Is in the midst of the park

The national park is an unrestricted natural area but subjected to regulations which must be known by all visitors.

Advices

Make sure your equipment is appropriate for the day's weather conditions. Remember that the weather changes quickly in the mountains. Take enough water, wear sturdy shoes and put on a hat.

On your path...

The evolution of plant life (A)

At the pass stands a schist menhir (standing stone). To the north, in Trépaloup ravine, hewn flint implements bear witness to a human presence in the region since prehistoric times. Palynological analyses (studies of pollen fossilised in peatbogs) have allowed scientists to piece together the plant life on Mont Aigoual from 8,000 to 5,000 BC. Pine predominated, accompanied by birch and hazelnut. Then pine populations gradually diminished. The damp climate warmed up, favouring the spread of oak and hazelnut. Finally, the increased damp and cloud cover at altitude allowed fir and beech to develop. From the end of the first century BC, the substantial percentage of grasses shows that forest had receded in favour of pasture and prairies. This was the start of the great deforestation.

Short-grass prairies and heath on the summit of Mont Aigoual (B)

Here, only species with a short reproductive cycle can settle due to the frequently glacial climate. The heath has been invaded by heather and mountain pine. This zone is barely wooded due to the violent winds and is comparable to subalpine vegetation, consisting of short-grass prairies and heather and blueberry moor. It is sometimes called pseudo-alpine.

Cell (Marie Gueydon de Dives) (C)

This artwork, natural in architecture but artificial in execution, represents a passage between the interior and exterior worlds. Posing or opposing while questioning the notions of limit, porousness and opening.

This work encourages you to come inside but feel outside. To be the contemplative eye, the receiving ear, the conscience that objectifies reality.

Attribution : © Filature du Mazel

The meteorological observatory (D)

Inaugurated in 1824, the meteorological observatory was built on the initiative of Georges Fabre, one of the pioneers of the reforestation of Mont Aigoual. His work with the botanist Charles Flahault enabled the creation of the arboretum of L'Hort de Dieu. The first meteorological data were gathered by agents from the French National Water and Forestry Commission. Since 1943, the observatory has been managed by the National Meteorological Office. It is France's last mountain weather station that is inhabited year-round.

Tempus Fugit (Fiona Paterson, Donald Buglass) (E)

Time flies, conscience cries, death threatens, heaven invites, hell scolds, and man sleeps. Here, the effects of time and natural elements transform the wood used in the artwork; everything is an endless renewal at the same rate as the passing hours. How much time have we got left before everything is lost and it is too late to repair the damage? Nature will continue on its trajectory and efface the traces of Humanity on Earth.

Mont Aigoual weather station (F)

Inaugurated in 1894, this infrastructure is France's last mountain weather station to be inhabited. Its history is closely linked to the reforestation of Mont Aigoual. It has become a high-performance weather station with an array of modern test instruments, measuring devices for extreme conditions, and a museum/exhibition on meteorology. The 800 sq m exhibition will tell you more about climatology on Mont Aigoual and about meteorology in general.

Seated (Marie-Hélène Richard) (G)

Far from town, paths open the door to new rhythms. Another vision of life and time lets us breathe in the ever-present contemplation, stones, trees and skies. A physical experience of coming face-to-face with nature. A bench made of wood and branches, whose back becomes thinner as it rises towards the sky, as if to turn back into a tree.

A site for botanical experiments (H)

Marker 1

L'Hort de Dieu is located at an altitude of 1,300 m and shaped by an extreme climate. This site with its exceptional assets is a favoured study and experimentation zone for botanists. The tree collection is just over 100 years old, and some of the specimens are declining because of old age or else because they are not well-adapted to this mountain range. Today, there are 75 species left of the 140 that have been tested over the past century. To safeguard the interest of this heritage site, the Office National des Forêts and the Cévennes National Park are currently reflecting on renewing the collection.

Summit of Mont Aigoual (I)

At an altitude of 1,565 m, the climate is harsh: weather conditions are the same as they would be at 2,000 m elsewhere, with only four “frost-free” months a year. Winds of above 60 kph blow on 265 days a year, and the average annual temperature is 4.8°C. Trees do not have enough time to complete their life cycle. Local plant formations are those of the montane zone: subalpine short-grass prairies.

Attribution : © Nathalie Thomas

Archeosmart (Marc Limousin) (J)

Smartphone imprints appear on the rocks: fossils of the present that will become mysterious in the future. This carved stone, like the cup-shaped marks and other rock art of the region, discloses history revealed in matter and resonates with Malraux's phrase: “The future is a present given to us by the past”.

Pôle Nature 4 Saisons (K)

The Pôle Nature 4 Saisons of the Aigoual massif offers outdoor activities in all seasons in the central zone of the Cévennes National Park, overlooked by the legendary summit of Mont Aigoual (1,570 m). Discover our network of trails on foot, on horseback, by bike, or else by mountain-bike or with a donkey, as the fancy takes you!

Children can explore the orienteering circuit or geocaching. For the sportier among you we have laid out trail running circuits!

Prefer road biking? We have created circuits of varying difficulty levels so you can discover our villages and valleys.

Try not to make any noise! Wildlife enthusiasts can spot mouflons and other animals.

And if you would just like a gentle walk on the massif, the discovery trail “The cliffs of Mont Aigoual” is for you. There are various rest stops over its 4.5 km, with only 150 m in height difference.

We look forward to seeing you on our paths.

The Nests (Céline Pialot) (L)

Little by little, the bird makes its nest, its cosy nest, baby cocoon, wasps’ nest...

Like a bird, the artist has gathered materials offered by nature and has arranged them to build three nests, three refuges, three circles that reference perfection and invite meditation.

Attribution : © E. Fréget

Leaf-Tree (Alain Bernegger) (M)

Leaf-Trees use a veined structure to create a visual resonance between the tree and the leaf. The change of scale works like an inverted echo of this fractal structure. And as winter comes, the eternal summer of the Leaf-Trees confronts the winter of the bare branches.

Catchment Area (Xavier Rèche) (N)

By its location and name, this installation evokes the nearby watershed between the Atlantic and Mediterranean. A vessel reduced to a suspended wooden framework, without strakes or gunwale, tilts in the direction of the runoff. It emphasises the first branches of a gigantic drainage system.
